Professional Profile

Senior Data Engineer and Analytics Engineer with 8+ years leading the design of scalable data pipelines (ETL/ELT), data warehousing, and business intelligence across cloud (Microsoft Fabric, Azure, AWS), hybrid, and on-premises environments, backed by a solid 15-year career in technology.

Specialized in scalable pipeline design, Medallion architecture (Bronze/Silver/Gold), robust and optimized dimensional modeling (both Star Schema and Snowflake), and the implementation of Database-as-Code (GitOps) architectures under the ISO/IEC 27001:2022 standard, integrating marketplace APIs using PySpark and T-SQL.

Professional with high autonomy, diagnostic capabilities, and a proactive focus on detecting and resolving complex issues. Dedicated to data quality, lineage, and automation for corporate consumer goods (CPG), retail, and e-commerce sectors, adopting and integrating Generative AI tools for code optimization and development cycle acceleration.

Work Experience

Data Engineer / Analytics Engineer (Contract Role) – BeOn Digital Transformation Partners

Modality: Hybrid | Buenos Aires, Argentina | 02/2026 – Present

Designed Fabric pipelines (PySpark) and hybrid infrastructures (Azure cloud and on-premises servers) under Medallion architecture (Bronze/Silver/Gold) on OneLake, structuring robust, scalable, and optimized data models (Star Schema and Snowflake).

Refactored the analytical model by migrating views to parameterized and idempotent stored procedures in T-SQL, incorporating transactional control, exception handling, and a centralized audit and execution logs framework.

Designed and implemented an incremental pipeline from Google Drive to OneLake for commercial spreadsheets with consistency validation and automations using Google Workspace APIs (Drive/Gmail), reducing manual workload by 90%.

Developed ETL/ELT workflows in PySpark (Fabric) and SQL for Sell-Out and Digital Shelf, integrating marketplace APIs (Mercado Libre, Rappi, VTEX) with complex OAuth2 flows, high-volume streaming downloads, and an EAN imputation engine for consumer goods brands (PepsiCo, Nutricia).

Automated complex batch loads, designing audit scripts in Pandas for historical log analysis and inconsistency detection (gap analysis), ensuring 99.9% operational availability and proactive early warning alerts.

Designed a Database-as-Code (GitOps) architecture for Azure SQL under ISO 27001 standards, automating DDL extractions (via PowerShell SMO) and deployments (.dacpac) with GitHub Actions and version control-linked alerts.

Performed unit and integrity testing across all modified data components and workflows, ensuring code quality and consistency using Git/GitHub.

Managed the project life cycle with high autonomy and diagnostic capabilities for incident resolution, administering tasks and sprints in Jira, and authoring detailed documentation in Confluence for technical profiles and clients.

Key Projects:

Modelización y Omnichannel Analytics (CPG & Retail): Refactored the analytical compliance and sell-out model, unifying queries and automating historical backfills for brands such as Danone, Unilever, and Laboratorios Bagó.

Digital Shelf & Sell-Out Seguros (e-commerce): Implemented Fabric pipelines for tracking visibility, pricing, and FTPS (TLS) exports with alerts and audit trails (Beiersdorf, Unilever, PepsiCo).

Home Automation Engineer – MJ Instalaciones (Family Business)

Modality: Hybrid | Buenos Aires, Argentina | 07/2024 – Present

Designed and implemented home automation and IoT systems (lighting, climate control, and security), optimizing energy efficiency and end-user experience.

Configured WiFi Mesh network infrastructures, integrated smart devices, and managed technical procurement and vendors for property tech staging.

Data Engineer / Analytics Engineer – Mazz Soluciones SRL (Data Raiders)

Modality: Hybrid | CABA, Argentina | 06/2022 – 07/2024

Designed, developed, and maintained production and hybrid ETL pipelines (Oracle Data Integrator 12c and Python integrations), processing millions of daily records from AWS (cloud/on-premises S3), APIs, and relational databases into corporate Data Warehouses.

Automated and orchestrated batch loads, ensuring availability, integrity, and traceability of data for reporting and analytics using proactive early warning alerts.

Designed and optimized robust and scalable dimensional models (both Star Schema and Snowflake), materialized views, and stored procedures (PL/SQL) to support complex corporate analytics.

Independently performed unit and integrity tests on modified components and workflows, ensuring consistency prior to production deployment.

Managed the code life cycle via GitHub CI/CD, collaborating in Agile sprints using Jira, and developing technical and functional documentation in Confluence for clients and internal teams.

Key Case Study – Laboratorios Bagó:

Participated in the development of the Modelo Analítico Corporativo (MAC), standardizing pipelines and data models that enabled a 20% increase in productivity for key production lines. ([View Success Case on Oracle's blog](#))

Data Engineer / Analytics Engineer – Ministerio de Seguridad de la Provincia de Buenos Aires

Modality: Hybrid | Buenos Aires, Argentina | 05/2014 – 05/2022

Designed ingestion pipelines (ETL) in Pentaho, KNIME, and Python (Pandas) for national criminal statistics (SNIC), processing 50k+ daily records in Parquet format to Google Cloud Storage and BigQuery.

Built interactive dashboards and hotspot indicators in ArcGIS, optimizing police resource deployment and territorial allocation across 135 municipalities by 15%.

Participated in the Sistema de Información Delictual (SID), digitizing incident reports to automate interoperability with the judicial system (SIMP) and integrating criminal data validation.

Designed the provincial criminal analysis platform, integrating geographic layers from the SID for crime pattern detection, operational planning, and executive indicators.

COBOL/CICS/DB2 Developer – TGV Excelencia en soluciones Informáticas

Modality: On-site | Buenos Aires, Argentina | 01/2012 – 12/2013

Designed, documented, and performed unit testing for critical financial processing applications in prominent projects such as MasterCard and FirstData.

COBOL/CICS/DB2 Developer – Programmer Analyst - CDA Informática

Modality: On-site | Buenos Aires, Argentina | 01/2011 – 01/2012

Conducted technical analysis, coding, and unit testing of banking software in prominent projects for BBVA and Isban.

Education

Bachelor of Science in Information and Communication Technologies for Public Safety (Thesis pending - Expected graduation: December 2026) – IUPFA – Instituto Universitario Policía Federal Argentina (2020 – Present).

Associate Degree in Systems Analysis – CAEEP – Centro de Altos Estudios en Especialidades Policiales (2017 – 2019).

Technical Degree in Personal and Professional IT – EET N°5 de Lanús (2005 – 2009).

Complementary Security Training: Higher and Auxiliary Technical Degree in Public Safety (Complex Crime Investigations) – Escuela de Policía Juan Vucetich (2014 – 2017).

Languages

Spanish: C2 (Native). | English: C1 (Advanced). | Portuguese: B1 (Intermediate).

Open Source Projects & Portfolio

Azure SQL Version Control & GitOps: Automated Database-as-Code solution using GitHub Actions and PowerShell scripts (SMO/T-SQL) for DDL schema backups and log immutability under ISO 27001 standards. Repository: github.com/a-martyniuk/azure-sql-version-control

MELI AIO (All-in-One) Dashboard: Comprehensive dashboard for billing and inventory automation in Mercado Libre. Backend in FastAPI (async Python), PostgreSQL (SQLAlchemy/Alembic), and OAuth 2.0 flows with token rotation. Repository: github.com/a-martyniuk/meli-aio

Hard Skills

Data Engineering & Analytics: Python / PySpark (3+ years), SQL / T-SQL / Fabric SQL Endpoint (7+ years), PL/SQL (5+ years), PostgreSQL (2+ years), Delta Lake / Delta Tables (1+ year), robust dimensional modeling (Fact/Dim, Star Schema, Snowflake) (4+ years), data pipelines and integration (Microsoft Fabric, Oracle Data Integrator 12c, Pentaho, KNIME), ArcGIS (1+ year).

Cloud Platforms & Enterprise Data Ecosystems: Microsoft Azure (Azure Blob Storage, ADLS Gen2, Key Vault, Enterprise Cloud/On-Premise), AWS Cloud & On-Premise (1+ year), Google Cloud Platform (GCS, BigQuery), transactional API & e-commerce marketplace integration (2+ years), Digital Shelf pipelines (1+ year).

Business Intelligence & Data Visualization: Power BI (1+ years), Tableau (1+ years), Google Looker Studio (1+ years), KPI design, executive dashboards, and self-service BI (4+ years).

DevOps, Versioning & Documentation: Git/GitHub (3+ years), CI/CD (GitHub Actions), GitOps / Database-as-Code, Jira (3+ years), Confluence (functional/technical documentation), Scrum & Agile methodologies (3+ years).

Legacy Systems & Mainframe: COBOL (2+ years), JCL (2+ years), CICS (2+ years), DB2 (1+ year), Mainframe z/OS (2+ years).

Soft Skills

High autonomy and diagnostic capabilities for problem solving, proactive early warnings, effective communication (technical-to-holder bridge), adaptability (public/private sectors), critical thinking, and Generative AI integration for development acceleration.
